OWNER'S AFFIDAVIT

I _____, of (address) _____
affirm that I am the owner of a certain tract or parcel of land located at:
_____ and that I have applied for a building
permit. I affirm that I am familiar with the prerequisites of Section 54-1.1111 of
the Code of Virginia and I am not subject to licensure as a contractor or
subcontractor.

(Affiant)
(Signature)

Signed and acknowledged by _____ in the county of
Pulaski, Virginia on the ____ day of _____, 20____, in the presence of
the undersigned witness.

(Witness)
(Signature)

§ 54.1-1111. Prerequisites to obtaining building, etc., permit. --- Any person applying to the building inspector or any other authority of a county, city, or town in this Commonwealth, charged with the duty of issuing building or other permits for the construction of any building, highway, sewer, or structure, or any removal, grading or improvement shall furnish prior to the issuance of the permit, either (i) satisfactory proof to such inspector or authority that he is duly licensed or certified under the terms of this chapter to carry out or superintend the same, or (ii) file a written statement, supported by an affidavit, that he is not subject to licensure or certification as a contractor or subcontractor pursuant to this chapter. The applicant shall also furnish satisfactory proof that the taxes or license fees required by any county, city, or town have been paid so as to be qualified to bid upon or contract for the work for which the permit has been applied.

It shall be unlawful for the building inspector or other authority to issue or allow the issuance of such permits unless the applicant has furnished his license or certificate number issued pursuant to this chapter or evidence of being exempt from the provisions of this chapter.

The building inspector, or other such authority, violating the terms of this section shall be guilty of a Class 3 misdemeanor. (Code 1950, § 54-138; 1970, c. 319; 1980, c. 634; 1988, c. 765; 1990, c. 911; 1991, c. 151; 1992, c. 713; 1995, c. 771; 1998, c. 754.)

Cross references. --- As to punishment for Class 3 misdemeanors, see § 18.2-11.

**Agreement in Lieu of an Erosion & Sediment Control Plan for
a Single Family Residence**

Building Permit No. _____
Subdivision (if applicable) _____
Lot No. (if applicable) _____

In lieu of submission of an erosion and sediment control plan for the construction of this single family dwelling, I agree to comply with any reasonable requirements determined by the county engineer of Pulaski County, Virginia. Such requirements shall be based on the conservation standards contained in the Pulaski County Erosion and Sediment Control Ordinance, and shall represent the minimum practices necessary to provide adequate control of erosion and sedimentation on or resulting from this project.

As a minimum, all denuded areas on the lot shall be stabilized within seven days of final grading with permanent vegetation or a protective ground cover suitable for the time of year.

I further understand that failure to comply with such requirements within three working days following notice by the representative of Pulaski County could result in citation for violation of the Pulaski County Erosion and Sediment Control Ordinance.

Pulaski County Building Department

Summary of Code Changes in the 2021 Virginia Statewide Building Code

This list does not include all code changes, it includes major substantive changes that impact residential projects. The effective date is January 18, 2024. Permit applicants may choose to use the 2018 or 2021 until January 18, 2025. After January 18, 2025 the 2021 Virginia Statewide Building Code will be enforced.

Residential Code Changes

Section R314.3 Building Planning – Smoke Alarms: A new location requirement addresses smoke alarms where high ceilings are adjacent to hallways serving bedrooms.

- Smoke alarms shall be installed in the hallway and in the room open to the hallway in dwelling units where the ceiling height of a room open to a hallway serving bedrooms exceeds that of the hallway by 24 inches (610 mm) or more.

Section R324.6.2 Building Planning – Solar Energy Systems: This amendment simplifies solar setback requirements at horizontal ridges by requiring no less than an 18-inch clear setback on both side of a horizontal ridge.

- Not less than an 18-inch clear setback is required on both side of a horizontal ridge.

Section R506.2.3 Floors – Vapor Retarder: A minimum 10-mil vapor retarder conforming to ASTM E1745 Class A requirements with joints lapped not less than 6-inches shall be placed between the concrete floor slab and the base course.

Section N1102.1.3 Energy Efficiency – Building Thermal Envelope: The attic/ceiling minimum R-value has increased from R-49 to R-60.

Section N1102.2.9 Energy Efficiency- Slab Insulation: Slabs shall be insulated with an R-10 continuous insulation to a depth of 4 feet.

Section N1102.2.7 Energy Efficiency- Floor Insulation: This code change provides clarification for the installation of floor cavity insulation.

Section N1102.4.6 Energy Efficiency - Electrical and communication outlet boxes: Electrical and communication outlet boxes installed in the building thermal envelope shall be sealed to limit air leakage between conditioned and unconditioned spaces. Electrical and communication outlet boxes shall be tested in accordance with NEMA OS 4 and shall be marked “NEMA OS 4” or “OS 4”.

Section N1103.3.5 Energy Efficiency – Duct Testing: This section has been updated with current test standards and requirements. **Ducts and air handlers entirely within the building thermal envelope are on longer exempt and must be tested.**

Section N1103.6.3 Energy Efficiency – Mechanical Ventilation Systems: Mechanical ventilation systems are now required to be tested.

- Mechanical ventilation systems shall be tested and verified to provide the minimum ventilation flow rates required by Section N1103.6.

Section N1104.2 Energy Efficiency- Electrical Power and Lighting Systems: This code change requires all permanently installed interior lighting fixtures to be controlled with a dimmer, and occupant sensor control or another control that install or built into the fixture

- Permanently installed lighting fixture shall be controlled with a dimmer, an occupant sensor control or another control that is installed or built into the fixture.

Section P2503.5.1 Plumbing Administration – Inspections and Tests: This code change details new requirements for rough plumbing tests and the addition of vacuum testing.

- Water test. Each section shall be filled with water to a point not less than 10 feet above the highest fitting connection in that system.
- Vacuum test. The portion under test shall be evacuated of air by vacuum-type pump to achieve a uniform gauge pressure of -5 pounds per square inch or a negative 10 inches of mercury column. This pressure shall be held without the removal of additional air for a period of 15 minutes.

Section P2905.3 Water Supply and Distribution – Heated Water Distribution System: The developed length of hot water piping shall not exceed 100 feet.

- The developed length of hot water piping, from the source of the hot water to the fixtures that require hot water, shall no exceed 100 feet. Water heaters and recirculating system piping shall be considered to be sources of hot water.

Section E3601.8 Services – General Services – Emergency Disconnects: An emergency service disconnect is required in a readily accessible outdoor location:

- For one- and two-family dwelling units, all service conductors shall terminate in disconnecting means having a short-circuit current rating equal to or greater than the available fault current, install in a readily accessible outdoor location. If more than one disconnect is provided, they shall be grouped.

Section E3606.5 Services – Service Equipment – Surge Protection: A surge protective device is required at the service panel.

- All services supplying one- and two-family dwelling units shall be provided with a surge protective device installed in accordance with section E3606.5 through E3606.5.3

Section E3901.4 Power and Lighting Distribution – Receptacle Outlets: Island and peninsular receptacle spacing is now based on the square footage of the countertop surface.

Section E3902 Power and Lighting Distribution – Ground-Fault and Arc-Fault Circuit-Interrupter Protection: This code change removes the 20-amp limitation. The ground-fault circuit-interrupter protection is required for up to 250-volt receptacles in the identified locations.

Section E3902.5 Power and Lighting Distribution – Ground-Fault and Arc-Fault Circuit-Interrupter Protection: This code change requires ground-fault circuit-interrupter protection in both unfinished and finished basement areas.

2021 Virginia Residential Code

2021 Residential New Construction Radon Requirements

APPENDIX AF RADON CONTROL METHODS

AF104.1 Testing.

Where radon-resistant construction is required, radon testing shall be as specified in Items 1 through 11:

1. Testing shall be performed after the dwelling passes its air tightness test.
2. Testing shall be performed after the radon control system and HVAC installations are complete. The HVAC system shall be operating during the test. Where the radon system has an installed fan, the dwelling shall be tested with the radon fan operating.
3. Testing shall be performed at the lowest occupied floor level, whether or not that space is finished. Spaces that are physically separated and served by different HVAC systems shall be tested separately
4. Testing shall not be performed in a closet, hallway, stairway, laundry room, furnace room, bathroom or kitchen
5. Testing shall be performed with a commercially available radon test kit or testing shall be performed by an approved third party with a continuous radon monitor. Testing with test kits shall include two tests, and the test results shall be averaged. Testing shall be in accordance with this section and the testing laboratory kit manufacturer's instructions.
6. Testing shall be performed with the windows closed. Testing shall be performed with the exterior doors closed, except when being used for entrance or exit. Windows and doors shall be closed for not fewer than 12 hours prior to the testing.
7. Testing shall be performed by the builder, a registered design professional or an approved third party.
8. Testing shall be conducted over a period of not less than 48 hours or not less than the period specified by the testing device manufacturer, whichever is longer.
9. Written radon test results shall be provided by the test lab or testing party. The final written test report with results less than 4 picocuries per liter (pCi/L) shall be provided to the code official.
10. Where the radon test result is 4 pCi/L or greater, the fan for the radon vent pipe shall be installed as specified in Sections AF103.9 and AF103.12.
11. Where the radon test result is 4 pCi/L or greater, the system shall be modified and retested until the test result is less than 4 pCi/L.

Exception: Testing is not required where the occupied space is located above an unenclosed open space.
